

Array some & Every function

Some function :- Syntex :- `array.some(callback funn)`

They return either true or false value from the callback funⁿ.
When they return true value wif any one of element of array satisfied the condⁿ of a callback funⁿ first time then they return true otherwise check for every ele of array and return false.

Refer :- 1 oct → someevery → first.js

every :- This is exactly opposite of some funⁿ
They check the the condⁿ of callback funⁿ on every ele of array and if it is not satisfied by any & one of ele then immediately they return false otherwise they ~~ch~~ apply the condⁿ on ~~ex~~ every ele then finally return true value.

Refer → 1 oct → some&every → third.js
